1. Company understanding

Zenith is the parent AI/digital innovation brand: AI & ML solutions, digital products, and culture-led marketing. Its ecosystem includes fashion intelligence (J.E.R.K.), education (AI4Education), music (MusicLabel AI), AI literacy (AI Insight), and e-commerce (Baby Dino).

J.E.R.K. is the consumer-facing fashion + culture AI product: trend forecasting, live signals, AI look recommendations, colour/palette direction, and industry intelligence. Together they sit at the intersection of content, code, and culture.

2. What is already working

Zenith

- Clear AI + culture positioning
- Portfolio narrative connecting multiple products under one engineering brand
- Services story (chatbots, CV, NLP, custom ML) matches intern role expectations

J.E.R.K.

- Strong brand voice (“read the room, read the future”)
- Concrete AI outputs: look match scores, season/occasion, silhouette, palette, “why this works”
- Product surface already supports Colour Analysis / fashion AI storytelling
- Free plan mentioned — good for acquisition if made more visible

3. Improvement suggestions

A. Zenith website & trust

- **Fix hero metrics** — Stats currently render as 0+ / 0%. Replace with real numbers or remove until live.
- **Surface in-house AI** — Add product cards for Colour Analysis AI and Zenith Fashion / J.E.R.K. with problem → approach → demo CTA.
- **Proof blocks** — Short case snippets (latency, accuracy, user save-rate) beat generic enterprise AI copy.

B. J.E.R.K. product & Colour Analysis AI

- **Make Colour Analysis the hero loop** — selfie → undertone/season → 6–8 hex palette → 2–3 outfit recommendations (best Instagram demo).
- **Show method, not only claims** — Add source categories, refresh time, and confidence on Trendwall cards.
- **India-context styling** — Office / festive / wedding / campus occasions and Indian wardrobe constraints.
- **Feedback loop** — Track save / wear / reject on looks → improve ranking; publish match-quality over time.

C. Instagram strategy

Zenith: builder / tech trust — demos, build-in-public, behind-the-model posts. CTA: “See what we built.”

J.E.R.K.: product / culture / daily use — trends, palettes, AI looks, Reels. CTA: “Try Colour Analysis free.”

Weekly system: Mon trend signal · Wed AI Look + hex palette · Fri Ask J.E.R.K. Reel · Stories polls → Colour Analysis · Zenith 1 weekly behind-the-model post.

Cross-brand rule: Zenith = we build it · J.E.R.K. = you use it · always cross-tagged.

D. AI intern projects I can own

- Colour Analysis MVP — face crop → undertone estimate → seasonal palette → outfit rules
- Trend signal scorer — hashtag/keyword velocity → confidence → Instagram caption draft

- Outfit recommender eval — palette harmony + contrast + preference ranking metrics

4. Priority roadmap (first 2 weeks)

P	Action	Why
P0	Fix Zenith hero stats + add Colour Analysis / Fashion product cards	Credibility + discovery
P0	Instagram bio + highlights → Colour Analysis demo	Conversion
P1	Ship Colour Analysis share card (palette + outfits) for Reels	Viral loop
P1	Add confidence + timestamp on Trendwall	Trust in AI claims
P2	Feedback logging (save/reject looks)	Model improvement

5. Closing note

Zenith's ecosystem is broad; J.E.R.K. is the sharpest product story. The highest-ROI move is tightening the loop between **Colour Analysis AI** → **Instagram demos** → **J.E.R.K. usage**, while Zenith becomes the credible “we engineered this” layer behind it. Happy to start immediately on colour analysis, fashion recommendation, or trend-signal pipelines.
